Dr. Cristian Scognamiglio & Dr. Alessandro Perucchi, Switzerland

Cristian Scognamiglio
DDS, Master in oral surgery
Graduated with honours from the University of Varese (Italy) in 2018.
Since 2020, Dr. Scognamiglio works at his own clinic with Dr. Perucchi in Mendrisio, Switzerland. Active as a researcher and speaker at several national and international congresses, since 2022 he is an opinion leader for Polydentia SA.
Member of the professional societies SSO, DDS, EAO and ITI.

Alessandro Perucchi
DDS, specialist in oral surgery
Dr. Perucchi graduated in dentistry in 2005 in Bern. In 2011 he obtained the title of SSO specialist in oral surgery. In 2012 he opened his own dental clinic in Mendrisio. Since 2007 has been teaching at universities and training courses in Switzerland and Europe. Author of several scientific publications.
Member of the professional societies SSO, EAO, fellow ITI and founder of MINEC and DDS.

product used

The Polydentia products used in this clinical case are:

Unica proximal

anterior matrices

Veneers makeover with Unica Proximal

Case report

A patient came to our attention for the restoration of multiple carious lesion in the anterior region.

Following a preliminary analysis, we identified several interproximal lesions on the central and lateral incisors.

The following case study illustrates the step-by-step direct procedure using Polydentia Unica proximal anterior matrices.

01

Preoperative situation evidencing multiple carious lesions on 11D, 12M, 21D and 22M. The lateral incisor 22 was compromised both mesially and distally, requiring a major restoration.

02

Lateral views of the preoperative situation.

03

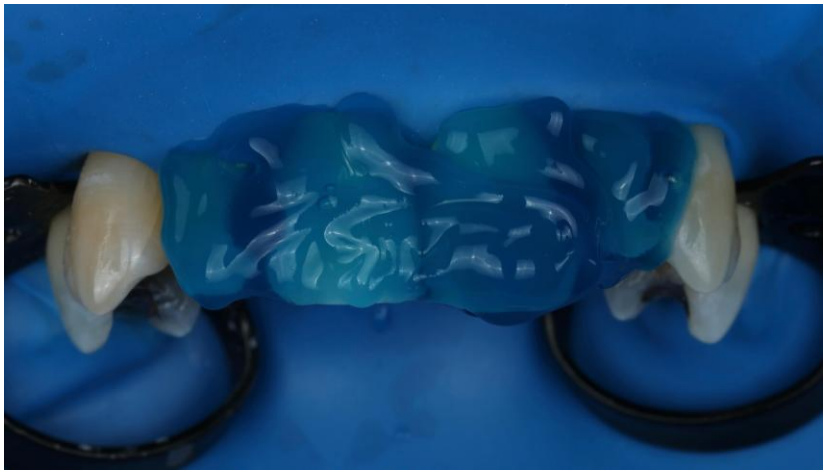

The quadrant after rubber dam application, removal of the carious lesions, cleaning and disinfection.

04

Occlusal view of the quadrant after preparation

05

Etching process

06

Unica proximal anterior matrices were placed on 12M, 11M, 11D, 21M, 21D, 22M and 22D. Their specially designed shape provides good visibility and access to the working area, as well as stability, enabling an accurate proximal contour and eliminating the need for wedges.

07

Occlusal view with matrices in place.

08

Frontal view after direct composite restoration before polishing.

09

Restoration completed, focus on incisor 21 - 22 before polishing

10

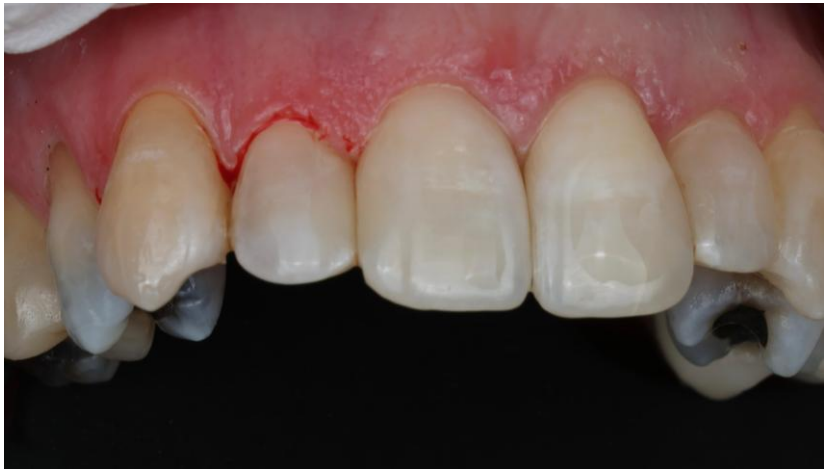

Restoration completed, focus on incisor 11 - 12 before polishing

11

The final outcome after polishing.

12

The final outcome after polishing, focus on incisors 11 - 12

13

The final outcome after polishing, focus on incisors 21 - 22

14

The final outcome after polishing, occlusal view

Veneers makeover with Unica Proximal

Conclusion

Unica Proximal is a smart solution for everyday direct aesthetic and functional anterior restorations.
Designed to fit anterior teeth optimally, it provides better visibility and access to the operative field than other solutions, such as posterior sectional matrices.

In this clinical case, Unica Proximal proved to be the ideal solution for restoring four teeth in one appointment.
Furthermore, opting for a direct restoration over alternative indirect solutions enables patients to leave with a more natural and 'personal' smile at an affordable price.
